

Presentation grading sheet

Session: \_\_\_\_\_ Date: \_\_\_\_\_ Presenter(s): \_\_\_\_\_

Paper: \_\_\_\_\_

Score each criterion from 0 to 5 points. The descriptions show what earns 5, 3 and 1 points; 4 and 2 lie in between, and 0 means the criterion was not addressed.

| Criterion        | 5 points                                                                                                                                                    | 3 points                                                                                               | 1 point                                                                                      | Score |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|-------|
| Clarity          | Follows the two-part structure, uses uncluttered slides with visual aids, and finishes within 25 minutes.                                                   | Mostly easy to follow, but some slides are overcrowded, transitions are unclear, or the timing is off. | Hard to follow: text-heavy slides, a part is missing, or the time limit is clearly exceeded. |       |
| Understanding    | Accurately presents the argument, research question, hypotheses, method, data, unit of analysis and key findings, and links the design to the paper’s goal. | Mostly accurate, but some elements of the design are missing or treated superficially.                 | Misrepresents the paper or leaves out core elements of its design.                           |       |
| Critique quality | Names specific strengths and the main limitations of the design (e.g., measurement, validity, scope) and stays constructive.                                | Identifies limitations, but they are generic, minor or one-sided.                                      | The critique is missing, superficial or merely dismissive.                                   |       |
| Reasoning        | Focuses on one key limitation, justifies why it matters, and derives the proposal from it step by step.                                                     | The link between critique and proposal is there, but partly implicit or weakly justified.              | The proposal is unrelated to the critique or not justified.                                  |       |
| Feasibility      | Proposes a concrete, realistic design (data, cases, empirical strategy) that would address the limitation.                                                  | The design is plausible but vague on data or method, or partly unrealistic.                            | The proposal is unrealistic or is not a research design.                                     |       |
| Discussion       | Answers questions accurately, takes up critique, and uses it to improve the proposal.                                                                       | Answers most questions, but engages little with the feedback.                                          | Struggles to answer questions or dismisses the feedback.                                     |       |

Total: \_\_\_\_\_ / 30 points      Grade: \_\_\_\_\_      15 points = 4.0 (pass), 30 = 6.0, linear in between; rounded to half grades; below 15 never a pass. Pairs: same grade.

|        |       |       |       |       |       |       |      |     |     |     |     |
|--------|-------|-------|-------|-------|-------|-------|------|-----|-----|-----|-----|
| Points | 29–30 | 25–28 | 21–24 | 17–20 | 15–16 | 12–14 | 9–11 | 7–8 | 4–6 | 2–3 | 0–1 |
| Grade  | 6.0   | 5.5   | 5.0   | 4.5   | 4.0   | 3.5   | 3.0  | 2.5 | 2.0 | 1.5 | 1.0 |
